EDUCATION

Pennsylvania State University

Software Engineering, Bachelor of Science
Game Development/Design, Minor

Class of 2020

Overall GPA: 3.25

EXPERIENCE

Senior Software Engineer

Mastercard (SessionM); Remote, PA / March 2022 – Present

- Architect and deliver scalable backend platform solutions supporting enterprise loyalty and incentive programs for high-volume global clients including McDonald's and American Airlines
- Lead large-scale client migrations from legacy architectures to SessionM 2.0 platform while maintaining uninterrupted live production traffic and data integrity
- Design and implement distributed API services and event-driven workflows supporting high-throughput transaction and reward processing systems
- Drive system reliability and operational excellence initiatives maintaining ~99% platform uptime across production environments
- Design database scaling strategies and performance optimizations to support sustained client growth and increasing data throughput
- Architect data storage solutions leveraging AWS DynamoDB for non-relational, high-scale workload patterns alongside SQL Server for relational transactional data and reporting workloads
- Leverage AWS and Azure cloud-native services to build resilient, highly available, and horizontally scalable service architectures
- Own full software lifecycle delivery including technical design, implementation, production deployment, and post-release monitoring and optimization

Software Engineer

Naval Nuclear Laboratories; Pittsburgh, PA / Oct 2020 - March 2022

- Develop software for system management and setup, including installing/uninstalling, configuring, and running software on remote and local systems
- Integrate customer feedback into our agile workflow and sprint cycles
- Develop a scalable solution for remotely monitoring pre-production and production server clusters
- Create high-quality user and developer documentation for furthering our knowledge management on a per-product basis
- Maintain legacy systems to use modern data-handling techniques
- Hold and maintain a U.S Department of Energy clearance

Software Engineer

WhiteThorn Digital; Erie, PA / Oct 2019 - Feb 2020

- Researched different solutions for issues faced in real-time production environments
- Developed a cross-platform solution to allow for the release of software on 6+ platforms
- Used Unity and many other open-source libraries to speed up production and increase business value

Undergraduate Research Assistant

Penn State; Erie, PA / Aug 2019 - Dec 2019

- Used Unity and C# to develop a virtual reality manufacturing plant
- Involved in the development and testing for a learning tool that seeks to aid students in learning statistical analysis for industrial engineering applications
- Validated the simulation in Industrial Engineering classrooms at Penn State to test the effectiveness of the product

Software Engineer

Erie Insurance; Erie, PA / May 2017 - Aug 2019

- Designed and implemented automated testing frameworks using Selenium and Java, enabling repeatable monthly regression testing and improving release confidence
- Built internal testing tools and continuous testing framework components within an agile development environment
- Refactored legacy web applications and administrative portals to improve maintainability, organization, and centralized deployment architecture
- Developed mobile-integrated prototypes using Mendix and Android Studio to evaluate emerging technologies and demonstrate business value to stakeholders
- Collaborated with cross-functional teams to gather requirements, validate feasibility, and present technical solutions and experimental product concepts

ADDITIONAL SKILLS

C#, .NET Core, AWS, Lambda, Dynamo DB, SQL Server, C++, C, Java, JavaScript, TypeScript, Agile, Scrum, Node.js, HTML, CSS, Python, Mendix Studio, MarkLogic, MIPS Assembly, Selenium Automation, Unity, Unreal Engine, Virtual Box, Multithreading
